

Definition of done - Scrum Master

From the perspective of the Scrum master, a requirement is done when:

- the requirement is fully analysed,
- the required diagrams for the requirement are well documented
- the code is implemented and refactored
- the tested using unit tests and black-box testing.

Definition of done - Product Owner

From the perspective of the Product Owner, a requirement is considered done when it follows thoroughly the use case description, passes successfully all the tests, fully covers the desires of the stakeholders.
